

# HOME VISITS

## Home Visits

The Home & Community Care Department has a RN and a PCA who do home visits on clients who are post-surgical clients, clients that require wound care or personal care, clients who require weekly, bi weekly, or monthly monitoring for therapeutic care ie: Blood Pressures or Blood Sugars. The Home Care Nurse also does visits in the home when completing Homemaking assessment evaluations, home and safety check evaluations and the need for medical equipment evaluations. The PCA provides weekly personal care to clients that need assistance on each reserve. She will also provide foot and nail care in the home if clients are unable to attend our foot care clinic. The Home & Community Care Department also has a CHR who is a Certified Diabetic Prevention Worker. She is available to all community members for nutritional counseling or blood sugar testing. This can be for clients who are diabetic, pre-diabetic or have family members who are diabetic. She has a library of resources in our office at SCHSS for clients who would like more information and education on Diabetes.
